

HIGH-INTENSITY WORK

Direct aircraft maintenance activity involving defect handling and scheduled technical servicing.

0
1

HIGH-INTENSITY

Direct aircraft maintenance and technical servicing

◆ 1. Defect Identification & Defect Rectification

Personnel directly working on the aircraft for **identification, diagnosis, troubleshooting, isolation, and rectification of defects**. This includes hands-on maintenance required to restore the aircraft or system to serviceable condition.

• Hands-on aircraft work • Troubleshooting • Defect rectification

◆ 2. Routine Servicing

Personnel carrying out **hourly-based or calendar-based servicing** of the aircraft. These are planned maintenance actions performed at defined operating-hour or calendar intervals.

• Hourly-based servicing • Calendar-based servicing • Scheduled maintenance

QUICK IDENTIFICATION

If the primary duty requires direct technical work on the aircraft—especially defect rectification or scheduled servicing—classify it under **High-Intensity Work**.

Examples: defect investigation, system troubleshooting, rectification tasks and periodic aircraft servicing.

MODERATE-RISK WORK

Operational, mission-support, control, documentation and coordination duties that support aircraft operations without being primarily hands-on defect rectification.

0
2

MODERATE RISK

Operational support, control, coordination and administration

◆ 1. Flight Servicing

Personnel involved in flight servicing activities such as **AFS, BFS, TRS, and BTWS** carried out in support of aircraft operations and preparation for flying tasks.

• **AFS • BFS • TRS • BTWS**

◆ 2. Mission-Based Sortie

Personnel supporting mission-specific sortie activities, including **TC installation, cargo operations**, and other mission-related preparation or support duties.

• **TC installation • Cargo operations • Mission support**

◆ 3. AMCO – Aircraft Maintenance Control Organization

Personnel working within AMCO and performing **aircraft maintenance control and documentation-related coordination**, including monitoring, recording, tracking and processing maintenance information.

• **Maintenance control • Records • Coordination**

◆ 4. Staff Office

Personnel responsible for coordinating between **officers and sailors** and handling the **administrative functions of the squadron**, including routine staff coordination and office management.

• **Officer-sailor coordination • Administration • Squadron support**

QUICK IDENTIFICATION

If the work primarily supports flying, missions, maintenance control or squadron administration rather than direct defect rectification, classify it under **Moderate-Risk Work**.

LOW-RISK WORK

Documentation-focused and routine nomination duties where the primary workload is administrative or coordination based.

0
3

LOW RISK

Documentation, routine records and unit nominations

● 1. Aircraft Documentation & Records

Personnel working in or around the aircraft environment whose primary activity is **documentation rather than hands-on maintenance**. This includes filling forms, updating system details and completing entries in **job cards** and related records.

• Forms • System details • Job cards • Records

● 2. Unit Nominations

Personnel assigned routine unit nominations such as **parade, cleanliness, line chief, and duty chief**. All similar routine nominations received for the unit are included in this workload category.

• Parade • Cleanliness • Line Chief • Duty Chief

QUICK IDENTIFICATION

If the primary workload is record completion, form filling, job-card/system entries or routine unit nominations, classify it under **Low-Risk Work**.

CLASSIFICATION PRINCIPLE

Identify the person's **primary type of work** for the relevant duty period and classify according to the actual nature of the workload being performed.
